

Capillary Mats

Available in 1 Liter/Meter (lpm) & 3 lpm capacity
flexibility in water-holding capacity
for different uses

Lined
for easy spacing

Available with or without backing layer
mat can hold water or
drain for faster dry down

FloraPlus 2 Layer	1 liter/sq meter capacity. No backing layer. 3.2 oz./sq foot
FloraPlus 3 Layer	1 liter/sq meter capacity. With backing layer. 3.2 oz./sq foot
VivaPlus 2 Layer	3 liter/sq meter capacity. No backing layer. 9.6 oz./sq foot
VivaPlus 3 Layer	3 liter/sq meter capacity. With backing layer. 9.6 oz./sq foot

Reimann Capillary Mat

Dramm Capillary Mats offer durability in sub irrigation.

Available in two water-holding capacities and with or without backing layer, our capillary mats ease watering while reducing water usage. FloraPlus, with lower water capacity, is great for propagation, smaller pots and where more frequent irrigation is possible. VivaPlus can hold more water and is better for larger containers. AquaFol™ filter covering is the perfect way to protect your mats and reflect more light. This filter cover can be thrown away after several uses and replaced to keep mats in good shape.

Great for use on benches or on the ground, Reimann matting is durable enough to be walked on. When kept clean, mats can last for 6 – 10 years.

Perfect for propagation, production and even retail applications where evenness of watering is important. Combine our mats with our PCAS Drippers to create an automatic, sub-irrigation system.
