

EasyClean Stakes

EasyClean Labyrinth Stakes

The Easyclean Labyrinth Stakes create back pressure to even the flow from multi-outlet drippers like other labyrinth stakes. With Easyclean, the labyrinth has been moved from inside of the tube to within the body of the stake. The threaded labyrinth portion of the stake removes easily for cleaning and replaces with just a twist. The water exits the stake from multiple outlets along the top to ensure even distribution.

This patent-pending design is available in an angled or straight stake design with a barb to connect to the leader tube. Perfect for potted crops where even watering is required.

Even with good filtration, clogs occur from algae growth or mineral deposits. Easyclean Stakes make removing those clogs easier.

Specifications

Works with Pressure Compensated Emitters
Required filtration: 100 μ (150 mesh)
Fits 0.125" ID microtubing

Item Numbers- ECLST-5: straight
ECLST-575: angled
Length - 5"
